

Dear Therapist / colleague

Acupuncture has come to be considered as a serious form of therapy. And this age-old therapy has become a far-reaching method of holistic treatment for every active therapist.

For me as a dentist, it is valuable because the relationship between symptoms and dental diseases is not only proven but also shows up constantly in my daily work. My interest in this form of treatment and the daily contact with it particularly ear acupuncture for over 10 years, caused me to address a practice suitable for implementation in the form of a visual overview.

Here are the result of may work:

This DVD will give a beginner in acupuncture an overview on the localizations of aural acupuncture and support the learning of this therapeutic method. This visual atlas is not intended to replace appropriate seminars and courses, but rather is meant as a helpful supplement.

The atlas will provide the advanced practitioner with a method for rapid recapitulation and consolidation of existing knowledge.

Each of over 240 items described in more than 1,000 individual images accurately described and explained on the ear

The construction of the 84-minute DVD and its handling is easy.

Its content is divided into three sections:

Basics

Within the basics, a detailed discussion on the anatomy of the ear in vivid close-ups is addressed. I have also attached great practical value to the suitability of this work

primarily on representations of real ears. Animations complements the representations of hidden points.

Localization

Here the acupuncture points for the ear are shown and classified into the anatomical / topographical areas of the ear.

Special points

In this section, you will find details related to acupuncture points, which are common in medical practice and their location, which are often distributed over the ear.

These points in particular have a superior effect and are often points whose outcome is of crucial clinical importance!

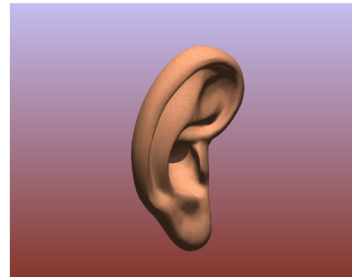

Dr. med. dent. Stephan Anders

Bad Aibling
2011

The visual atlas is playable on all DVD drives.

The section and the index-list from A to Z facilitate direct access to one of more than 240 points shown.
